

You've Got Our Promise

At Emtech we stand behind our products and guarantee each HearSaver.

1. We guarantee fit for 90 days.
2. We guarantee material and workmanship for 1 year.

In addition, each set of HearSavers is carefully marked with an identifying number and kept on file for 1 year. If a protector is lost or needs replacing, there is no need to take another impression. Merely order by name, number and date.

Once HearSavers are inserted employees forget them, and can move from high dB levels to normal conversation without removing or adjusting them.

Noise Reduction Rating	29 DECIBELS (WHEN USED AS DIRECTED)
THE RANGE OF NOISE REDUCTION RATINGS FOR EXISTING HEARING PROTECTORS IS APPROXIMATELY 0 TO 30 (HIGH NUMBERS DENOTE GREATER EFFECTIVENESS)	
EMTECH LABORATORIES, INC. HEARSAVER	
FEDERAL LAW PROHIBITS removal of this label prior to purchase	
 LABEL REQUIRED BY US E.P.A. REGULATION 40CFR Part 211 Subpart B	

* Computed on the use of 3 pairs of disposables per worker per week.

Emtech offers other custom products...

AquaSeal Floatable Swim Molds:

"Water, water everywhere... but not a drop in your ears."

THE EMTECH HEARSAVERTM WHERE QUALITY, ECONOMY, AND EFFECTIVENESS MEET.

Ever stop to think how much it costs to keep a worker in disposable plugs over a year's time? The answer may surprise you.

And it may also surprise you to know that for the price of 6-7 months' worth of disposables* your workers can be custom fitted with a durable pair of HearSavers that are **MORE** effective and will last for **years**. The savings are substantial.

And as an extra bonus, there is no storage or monthly re-ordering needed. No sizes to worry about!

To Wear Or Not To Wear

Until statements issued by OSHA during the 1970's, the decision of wearing ear protection was left pretty much undefined. As of January '81, however, only workers exposed to levels of 85 dB and under can voluntarily choose to wear protection. Workers exposed to 8 TWA hours of 90 dB or more **must** be protected. And the burden of finding reliable protection and of enforcement is placed on the **employer**. Unfortunately there is no such thing as the typical ear. And although expandable disposables and other plugs claim to fit all ears, some employees will find them comfortable and effective, while others will not. That leaves a gap in your protection plan.

Enter HearSavers. No other hearing protection can claim more comfort or effectiveness . . . for two reasons. First, HearSavers are carefully custom fitted of skin soft

materials by experienced technicians. Each protector follows the exact configurations of an individual's ear, and tightly occludes without discomfort. They have no pressure points, no hot spots, no sound leaks **and** no chance of being poorly seated in the ear (thus lowering effectiveness).

The second reason — the selective sound device itself. Unique in the industry, this device has no working parts to wear out or break down. It, along with the custom mold, is non-toxic, anti-allergenic, and 100% safe. A channel in the earmold, created by our exclusive process, guarantees its permanent placement and optimum noise reduction.

As a result, HearSavers are so comfortable and so effective that worker acceptance is extremely high. Employees find they can carry on normal conversation, answer telephones, hear alarms, even machine malfunctions, change elevation and move from high to low noise levels without adjusting or removing the HearSaver. No stopped up feeling either, since HearSavers are designed to allow both air and sound up to 80 dB to enter the ear virtually unrestricted. We have found that over 70% of individual users actually **also** take their HearSavers home for off-the-job protection while using chain saws, lawn mowers, motorcycles, shop equipment, hand guns, watercraft and other noise intensive activities.

Flesh

Brown

Clear

Orange

Actual Product Color May Vary

HearSavers are made of Emplex — a very soft pliable

material. They come in a variety of colors including Flesh, Brown, Clear and Safety Orange. All materials and colors are FDA approved. Each set comes complete with a removable neckcord in red or orange. To facilitate placement in the proper ear, we place a permanent red dot on the right protector of each set, as well as add a knot on the right side of the neckcord for insertion in low light areas.

And So They Claim . . .

Insurance claims, worker's compensation, absenteeism, medical expenses, their incidences are reaching an all time high . . . making it all the more essential for an employer to seek the best possible protection for his/her employees. With

HearSavers, not only are incidences of auditory destruction being dramatically lowered, but also there are reductions in worker accidents, depression, irritability, vertigo, nausea, cardiac problems (hypertension and hypertension), high blood pressure, headaches, nervousness, inefficiency, etc., etc.!

OSHA, as recently stated, foresees specific benefits in improved workplace safety, reduced absenteeism, medical costs and workman's compensation. With HearSavers, job related insurance will be a less frequent headache. And fewer claims will result from hearing injuries incurred off the job, or **on** the job when ears are over-protected.
